CAREER SUMMARY

Frontend Engineer with 4+ years shipping production-grade React and TypeScript applications, including micro-frontend-style modular architectures, custom high-performance data-grid components, and design-system-driven UI built directly from Figma. Experienced leading frontend delivery end-to-end — from requirement gathering and design collaboration through implementation, testing (Vitest), and performance optimization. Comfortable owning full-stack integration points (REST/GraphQL, Node.js APIs) when frontend work requires it, with working knowledge of CI/CD pipelines and cloud deployment (AWS, Azure).

TECHNICAL SKILLS

- **Frontend:** React, Next.js, Typescript, JavaScript, TanStack Query, Redux, Tailwind, Component/Design Systems
- **Testing & Quality:** Vitest, Unit & integration testing, code review standards
- **API Integration:** REST & GraphQL API Integration, LLM-based tool Integration, Node.js/Express.js backend collaboration, OAuth2
- **Databases:** PostgreSQL, MongoDB, Prisma, Redis/BullMQ
- **Tooling & DevOps:** Git/GitHub, AWS (*Lambda*, REST API gateway, *CloudWatch*, S3, *EC2*), Azure (*Functions*, VM, *ACI*)
- **Practices:** Prompt Engineering, AI-assisted development, Agile/Scrum, Figma-to-UI Implementations, mentoring

PROFESSIONAL EXPERIENCE

Freelance | Remote

4 months

Full Stack Engineer

April 2026 – Present

- Designed reusable frontend components with **React and Tailwind CSS**, improving UI consistency and reducing development time across multiple client projects.
- Engineered structured technical prompts and evaluated long-horizon full-stack code generation outputs — assessing architectural soundness and reasoning integrity — to support RLHF-based model alignment work.

CloudEQ | Chandigarh, India

3 yrs 4 months

Software Engineer II – Frontend Lead (*Hybrid*)

Aug 2025 – April 2026

- Led frontend architecture and delivery for a client-facing project-tracking dashboard: ran requirement-gathering sessions directly with Figma designers and stakeholders, then translated designs into a **custom high-performance React/TypeScript data table** (no table library) featuring fixed + scrollable columns, expandable multi-level rows, multi-range date comparisons, and windowed/virtualized loading for large datasets.
- Owned the frontend build end-to-end from design handoff to production, establishing component structure, state management patterns, and reusable UI conventions later adopted across the team.
- As full-stack owner of the underlying automation platform, architected the backend event pipeline (**Node.js, Redis/BullMQ, MongoDB**) that powered the dashboard's real-time status views — achieving 99% reliability across 500+ tracked events and cutting project intake overhead by 75%.
- Wrote comprehensive unit and integration tests with Vitest across UI components and services to maintain code quality and catch regressions pre-release.
- Collaborated within Agile/Scrum delivery cycles using structured Git branching and PR review workflows; mentored junior and mid-level engineers on frontend engineering standards.

Software Engineer I (*On-site*)

Jan 2023 – Aug 2025

- Developed and published enterprise PowerApps Canvas applications with custom **PCF components** built in **React and TypeScript**, including multi-screen navigation, MS user integration, and input/output data bindings.
- Improved app performance by centralizing **CSS** loading to the initial screen and restructuring component rendering, cutting unnecessary re-renders.
- Optimized a Resource & Project Management UI, reducing page load time by 800ms, improving Core Web Vitals, and driving a 10% increase in user engagement.

- Built event-triggered **AWS Lambda (Node.js)** integrations between HALO ITSM ↔ Jira and ServiceNow ↔ Jira, accelerating ticket resolution by 25% and eliminating ~80% of manual ticket synchronization.

InfoHub Innovations – Mumbai, India (*Remote*)

5 months

Software Engineer I

Aug 2022 – Dec 2022

- Refactored **React.js frontend architecture** for a high-traffic content platform, improving Largest Contentful Paint (LCP) by 10% and reducing Cumulative Layout Shift (CLS) from 0.23 to 0.12.
- Built secure Node.js backend services (OAuth 2.0) supporting automated content ingestion for 4,000+ monthly articles, reducing data errors by 60%.

Persistent System – Nagpur, India (*Remote*)

8 months

Software Developer (6M Intern & FTE)

Dec 2021 – Aug 2022

- Maintained and optimized IBM Netezza data-warehouse appliances using nzcli and nzsqli on **PostgreSQL** to monitor SPUs, debug SQL workloads, and containerize workflows with Docker in large-scale analytical database environments.

PROJECTS

react-finance-grid — (*Personal Project*)

[Link ↗](#)

- Built a modular reusable **React data-grid library** for financial workflows tabular architecture, supporting pinned columns, drag-and-drop column ordering, column highlighting, async expansion, and sticky grand totals.
- Implemented virtualized rendering and optimized layout logic to keep large datasets responsive while preserving fixed-column behavior and horizontal scrolling.
- Built an accessible column menu (sort, pin, hide, highlight, resize) and packaged the library for distribution with ESM/CJS builds, TypeScript declarations, CSS export and tests.

StreamSync — *Real time video sharing SaaS* — (*Personal Project*)

- Designing a full-stack desktop application for real-time video sharing with low-latency streaming (socket.io) and global distribution via AWS CloudFront.
- Integrated Whisper AI to auto-generate titles, descriptions, and transcripts from uploaded video.

EDUCATION

Bachelor of Technology — Computer Science and Engineering

Aug 2018 – June 2022

Lakshmi Narain College of Technology – Bhopal, India

GPA: **8.57**

CERTIFICATIONS & BADGES

- MongoDB Overview: Core Concepts and Architecture - [Link ↗](#)
- Microsoft Certified: Azure Fundamentals - AZ-900 - [Link ↗](#)
- Power Platform Developer Associate - PL-400
